Beckers Group is a leading worldwide supplier of coil coatings with an international organisation that ensures global coordination and consistent product standards. We are flexible and innovative and work in close cooperation with our customers.

We are focused on developing sustainable coatings – our vision is to become the most sustainable coatings company in the world.

Beckers' High Build Systems offer a range of products featuring a variety of bespoke resins, textures and gloss levels – all with the same potent properties:

- Exceptional surface hardness
- Superior scratch resistance
- High durability
- Flexibility
- UV resistance
- Excellent anti-corrosion performance

Beckry[®] Tough

Beckry[®] Max

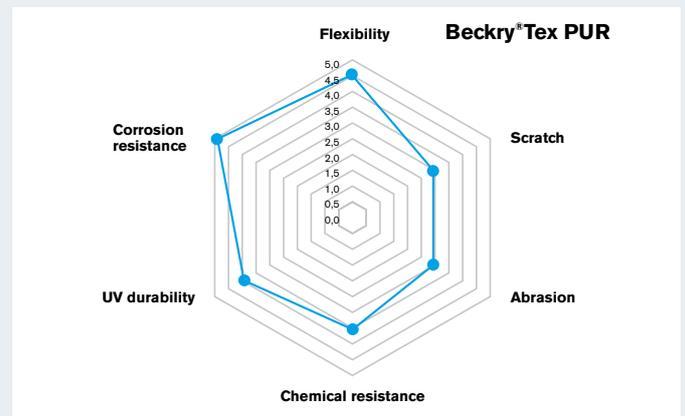

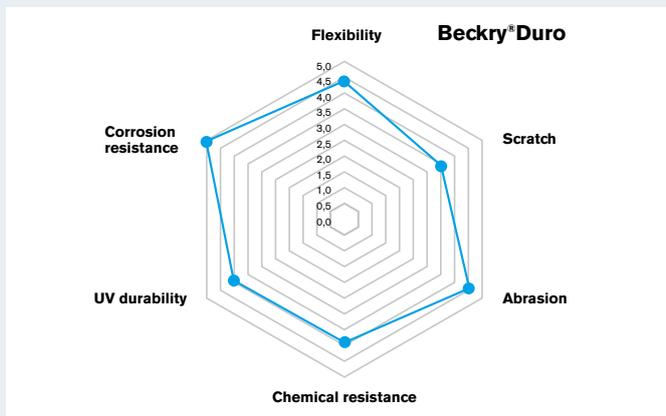

About Beckers:

A privately owned global industrial coatings company with focus on two business segments: Coil Coatings and Industrial Coatings. Beckers has operations at 24 locations in 18 countries.

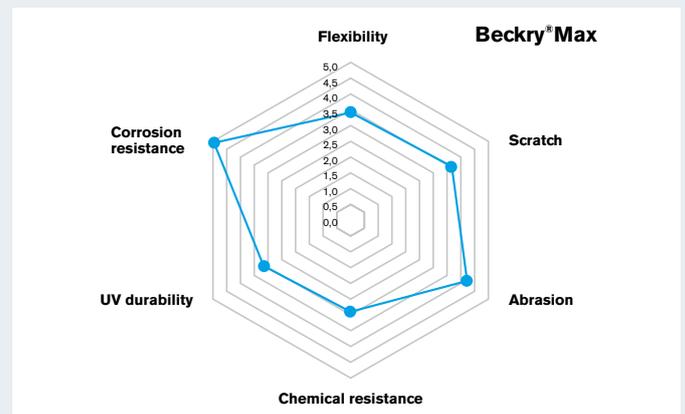

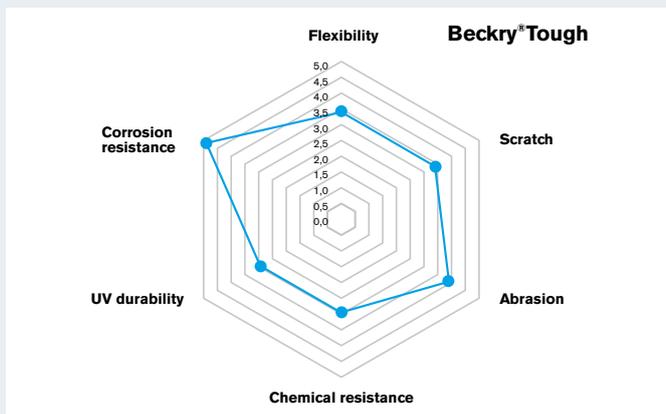

Performance

Beckers' High Build Systems offer a broad range of application options. Whatever your climate, corrosive environment or cost parameters, our systems offer the optimum balance between application properties and long-term performance.

Polyurethane Systems

Polyester Systems

Beckry®Duro is a highly UV-resistant coating system offering excellent chemical stability for cladding, roofing and rainwater systems. Scratch and corrosion resistant, it is the preferred choice for markets where coatings are exposed to sunlight or abrasive conditions, such as those caused by sand. Also suitable for indoor applications, where industrial buildings may be exposed to pollution.

Beckry®Tex PUR is a durable coating system especially suited for roofing. This weather resistant product features a range of wrinkle aspects.

Beckry®Tough ensures a tough surface that combines good flexibility with high corrosion and scratch resistance. Its low gloss level makes it ideal for coating rainwater systems and in the manufacture of roofing-tile sheets.

Beckry®Max structured-surface and bespoke resin chemistry also provides excellent performance for roofing and rainwater systems. Beckry®Tough and Beckry®Max properties make them suitable for colder climates.

Beckry®Duro is a polyurethane topcoat, applied in a thick coating of 25–30 µm. Providing excellent durability, reinforced with a polyamide structure, it offers excellent scratch resistance. Beckry®Duro is particularly suitable for cladding and roofing in markets that feature coastal or desert regions, and where high UV-resistance is essential.

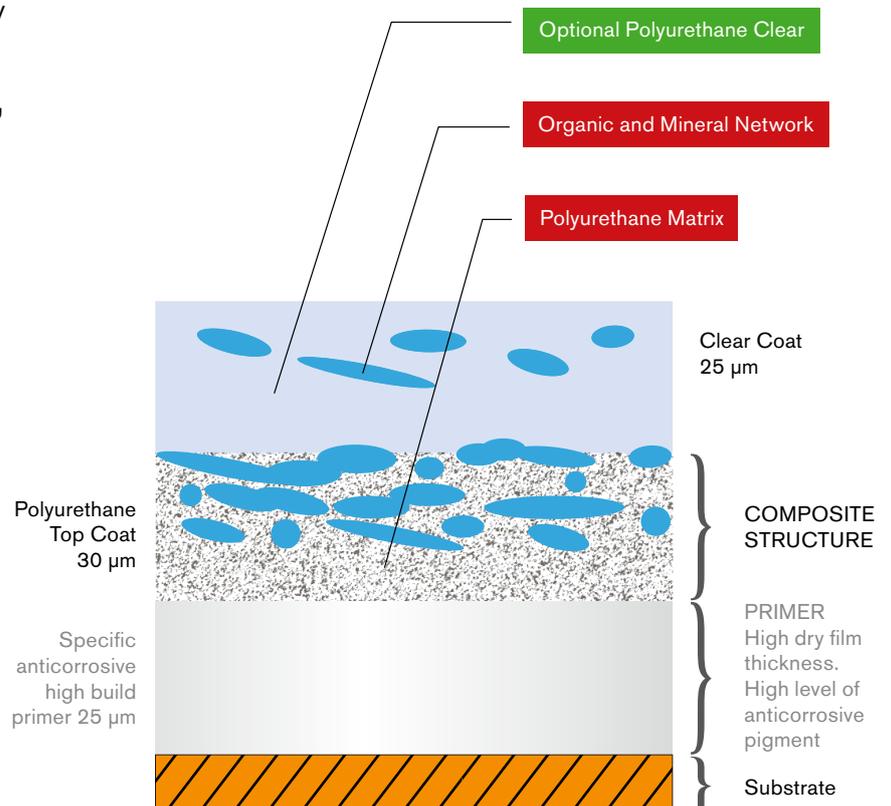

Coastal region Guadeloupe: Roofing coated with Beckry®Duro

A third layer for maximum protection!

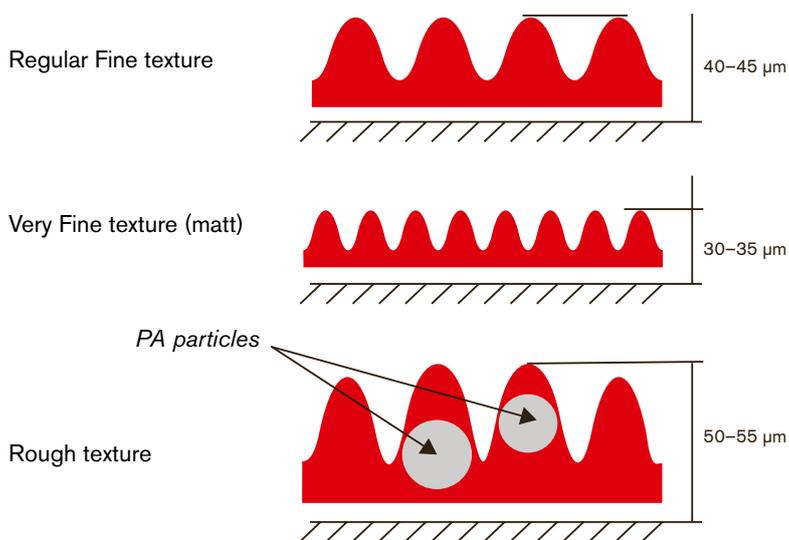

Beckry®Plus Clear Coat is a polyurethane topcoat, specially formulated to produce a high-density polymer network. Thickly applied and reinforced with organic and mineral compounds, Beckry®Plus provides unrivalled durability.

Applied on Beckry®Duro at 25 µm, Beckry®Plus Clear Coat is strongly recommended for use in coastal regions and in aggressive chemical environments.

Beckry®Tex PUR is a topcoat based on polyurethane resin that offers a very high outdoor durability and makes it possible to achieve high dry film thickness. It gets a textured surface when cured and contains polyamide giving the surface a very good scratch and wear resistance. Beckry®Tex PUR has excellent colour and gloss retention as well as chemical resistance. It is recommended to be used in conjunction with the high build polyurethane primer **Beckry®Prim**.

System composition:

This product is available in two wrinkle aspects both of which have a matt appearance, irrespective of the viewing angle.

Beckry®Tex PUR is available in a broad range of textures and colours for roofing and facades

Textured topcoats make an attractive option for metal roofing:

Photo courtesy of Budmat®

Beckry® Max is a well proven product with an excellent performance for roofing and rainwater systems. Its structured surface, bespoke resin chemistry and mid-gloss level (40 %) makes it an attractive option.

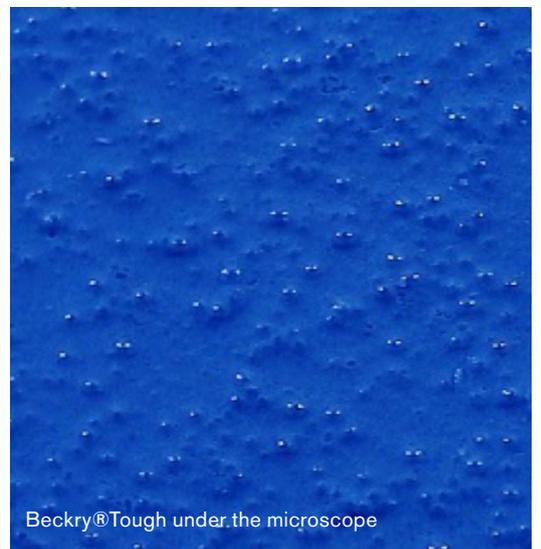

Beckry® Tough is a similar product, featuring a tough low-gloss (10%) surface, good flexibility and scratch resistance, ideal for roofing and rainwater systems. With its tough and abrasion-resistant surface, Beckry® Tough is the ideal choice for challenging processes such as roll forming and the manufacture of roofing-tile sheets.

Beckry® Tough derives its surface texture from the incorporation of polymeric beads in the paint formulation.

Beckers offers a premium selection of coatings for rainwater systems.

Beckry® Tough under the microscope

By varying the type, particle-size and dosage of polymeric beads, the visual effects become almost unlimited.
